Preface

This dissertation has been written as result of an ERASMUS-exchange programme, with the School of Geography and Environmental Management at Middlesex University and the Department of Economic Geography and Planning of Utrecht University, The Netherlands. This programme includes a placement period which was provided by the Economic Development Team of the London Borough of Enfield.

I would like to thank my supervisor Dr David North at Middlesex University, for his valuable, highly appreciated and much needed comments and help. I also would like to express my feelings of appreciation to all members of the Economic Development Team. Especially, to Tony Wallis, Urban Regeneration Officer, for introducing me to the work of a local government and Nick Triplow for comments on this document and the many interesting conversations.

During the years of my studies many different people have made contributions in this respect. From my Secondary School Geography teacher, Drs W. Albers to readers and lecturers at Utrecht University. It is impossible to name them all, but they all sharpened and in many cases, changed my views on Geography and therefore on the world around me. Although influenced by these people, the views expressed in this dissertation are entirely my own, unless otherwise stated.

I would like to express my deepest feelings of thanks to my parents, for their interest and support (and not at least in a financial way!). Finally, a very special word of thanks to my fiancée; so far away but always so close.

Lieke, thank you for nothing in particular but everything in general.

Johan van Duyvendijk
Enfield, May 1996.
